## **Nohau Solutions and Percepio Announce Partnership**

**Malmö, Sweden – February 11, 2025** – Nohau Solutions is excited to announce a new distribution partnership with Percepio AB, a trusted provider of developer tools for visual trace diagnostics and real-time application monitoring. This collaboration will deliver advanced quality assurance, testing, and observability tools, empowering embedded software developers to enhance product performance and security across the entire development lifecycle.

With a proven track record in optimizing embedded software development, Nohau Solutions is committed to enhancing software quality, safety, and security. By integrating Percepio’s advanced tools, such as **Tracealyzer** and **Detect**, Nohau will provide its customers with powerful solutions to streamline development and testing, gain real-time insights into software performance, and proactively diagnose issues to improve overall product quality.

“Partnering with Percepio ensures that we continue to offer software organizations the best tools possible” said Andreas Dyrhed, CEO of Nohau Solutions. “The Percepio products that we add to our portfolio will supplement and strengthen our existing ones. The products will on their own also create new possibilities both in the development and in the operations phase of the Software Development Life Cycle.”

“Based on our decade long commitment to improve quality and efficiency of embedded software, we’re now set to bring Continuous Observability to this industry. This requires competent partners who shares our vision.” said Andreas Lifvendahl, CEO of Percepio, and concluded “In Nohau Solutions, we found a great match. Their long experience in providing comprehensive tools solutions is augmented by their commitment to really support their customers all the way in all phases – through advice, training and services.”

The partnership between Nohau and Percepio will further extend the capabilities of embedded systems teams, making it easier than ever to build high-quality, secure, and reliable products. By combining Percepio’s top-tier observability solutions with Nohau’s specialized expertise and support, developers can reach new levels of efficiency and insight in their software development and testing efforts.

## **FOR IMMEDIATE RELEASE**

### **About Nohau Solutions AB**

Founded in 1981, Nohau is a well-known industry player who helps clients do better software development. Specializing in tools, training, and expertise for application and IoT developers. Serving organizations across Sweden, Norway, Denmark, and Finland, Nohau provides solutions that elevate software quality, security, and compliance, empowering customers to thrive throughout their product development journey. For more information, visit [nohau.eu](http://nohau.eu)

### **About Percepio AB**

Percepio AB provides continuous observability for critical edge and embedded software, enhancing development speed, software quality, and deployment security. Percepio Tracealyzer® enables real-time tracing and visualization, while Percepio Detect™ adds proactive anomaly detection and CI/CT integration. For deployed systems, Percepio DevAlert® ensures secure monitoring and reliability improvements. Scalable across diverse devices. Percepio collaborates with leading vendors of processors and operating systems within embedded systems and IoT such as Arm, Infineon, NXP Semiconductors, STMicroelectronics, Renesas Electronics, and Lynx Software Solutions. For more information, visit [percepio.com](http://percepio.com).
